StemBeads®

Experience precision control over your cell cultures with StemBeads® microbeads. These specially designed beads release growth factors steadily over several days, ensuring sustained and optimal conditions for growth. Simply add StemBeads® during regular media changes every 3-4 days to maintain peak performance and maximize your research outcomes.

DISC™ Devices

Discover the future of cell culture with our innovative hydrogels featuring StemBeads® technology. Easily maintain precise growth factor levels in your cultures for at least one week by adding just one DISC™ to each well. The growth factor signal can be cleanly and completely removed from cultures by removing the DISC using a pipette tip or vacuum. Streamline your workflow with DISCs™, ensuring efficient and consistent results every time.
